| Price: | 4.960,18 € (nett:4.168,22 €) |

Product description

This high-quality crankshaft has been specially developed for Porsche 911 models in the 993 series (built between 1994 and 1998) and for the Porsche 911 model 996 Turbo (built between 2000 and 2005). It bears the OEM numbers 99310202102 and 99310202101, which confirm its authenticity and compatibility with the specified vehicle models. As an original Porsche part, this crankshaft guarantees a perfect fit and performance that meets Porsche's high standards.

The crankshaft is used but in very good condition and undamaged. This makes it an excellent choice for owners who prefer original parts for the maintenance or repair of their Porsche 911 without having to bear the high costs of new replacement parts.

The crankshaft plays a central role in the engine by converting the linear motion of the pistons into a rotating motion, which is then transmitted to the transmission. Using an original Porsche crankshaft not only ensures optimum performance and reliability, but also the longevity of the engine.

This part is an excellent choice for maintaining the classic Porsche 911, especially for enthusiasts and professionals who value original parts and proven quality.
